Objective

Junior Software Engineer with hands-on experience designing and building a full-stack Flask application with a normalized relational database, authentication, and time-series business logic. Strong foundation in computer science and backend architecture developed through Harvard's CS50 and applied in a production-style personal project.

Technical Skills

Languages: Python, SQL, C

Frameworks: Flask, Flask-Login, Flask-SQLAlchemy

Databases: SQLite (PostgreSQL planned)

Tools: Git, Linux, VS Code, Alembic (migrations)

Projects

Smart Habit Tracker — Full-Stack Flask Application

Python, Flask, SQLAlchemy, SQLite

- Designed a normalized relational schema with foreign keys, uniqueness constraints, and indexed time-series queries
- Implemented secure user authentication and authorization with Flask-Login and hashed credentials
- Built habit categorization, daily logging, and streak/goal-tracking logic over timestamped activity data
- Enforced per-user data isolation at both the application and database layers
- Modeled user preferences (nudges, weekly goals, reminders) as first-class persistent entities
